Abstract: According to Ayurveda, among the 56 Upangas face is at the top, so everyone and mostly youngsters are most cautious and careful about the beauty of face. Face is index of mind and mirror of the body. Unfortunately, skin of the face is affected by certain anomalies in adolescence age which is the golden period of life. Acne Vulgaris is a chronic inflammatory disease of the pilo-sebaceous follicles characterized by comedones, papules, pustules and often scars, chiefly on cheeks, chin, nose, forehead and upper trunk. As per Ayurveda classics this condition can be correlated with Yavanapidaka which is the result of vitiated Kapha, Vata and Shonita.

Hence the present study was conducted to observe the efficacy of siravyadhan in the management of Yavanapidaka. The diagnostic parameters were assessed on the basis of Ayurveda as well as modern aspects like Pidaka on face including Medogarhathva, Ruja, Daha, Srava etc. A special proforma was prepared and patients were examined on the basis of available sign and symptoms. Patients were treated according to principles of Yavanapidaka Chikitsa with Siravyadhan. Remarkable results were observed in the form of improvement in the chief complaints of the patient.

Keywords: Yavanapidaka, Acne vulgaris, Siravyadhan.

INTRODUCTION

Beauty is a matter for joy forever. Everybody wants to remain not only healthy but beautiful too. Face is index of mind and mirror of the body, it is considered among the top while thinking about look and beauty. According to Ayurveda, among the 56 Upangas [parts] face is at the top so everyone and mostly youngsters are most cautious and careful about the beauty of face. Unfortunately skin of the face is affected by certain anomaly in adolescence age which is the golden period of life. Acne is the scourge of mankind and the travesty of youth. Acne Vulgaris is a chronic inflammatory disease of the pilo-sebaceous follicles characterized by comedones, papules, pustules and often scars, chiefly on cheeks, chin, nose, forehead and upper trunk. Acne tends to appear earlier in females, due to later onset of puberty in males. According to the Global Burden of disease (GBD) study, acne vulgaris affects 85% of young adults aged 12-25 years. Acne consistently represents the top three most prevalent skin conditions in the general population, as found in large studies within the UK, France, and the USA. The production of androgens during puberty explains in part, why acne vulgaris is so prevalent in this population.

Yavanapidaka [acne vulgaris] is described in Kshudraroga [minor skin diseases]. Due to aggravation of Kapha, Vata and Shonita [blood], Pidaka [papules] resembling the sprouts on the bark of Shalmali tree (Salvia rosmarinus) appearing on the face of adolescents is known as Yavanapidaka, which make the face ugly. Modern medications for acne include topical therapies; antimicrobials, hormones, surgery, U-V Irradiations; Intra lesions injections etc. But those have their own limitations. All these modern treatment modalities burn a hole in the pocket without curing the disease and are only effective until used, with a very high rate of relapse on leaving medicine. Looking into the above mentioned facts there is a need for a treatment which can treat effectively as well as reduces the recurrence of acne vulgaris. Panchakarma can be used in the disease for expelling out the vitiated Dosha [causative factor] causing the disease. In Ayurvedic texts, Vanamara Karma [therapeutic emesis] and Raktamokshana [blood-letting] are chief treatment mentioned for Yuvanapidaka along with certain topical applications and oral medications.
Methodology

Procedure of Raktamokshan Chikitsa (Siravyadhan):

**Poorva Karma:** Proper counseling & written consent of the patient was taken. The site chosen for Raktamokshan was cleaned with antiseptic solution.

**Pradhana Karma:** The most prominent vein at right hand cubital fossa was chosen for siravyadhan karma. After that small incision was performed on the marked region. The blood came out automatically, around 300ml blood was let out and stopped on itself.

**Pashchat Karma:** Application of Goghrita and Madhu over vrana was done.

DISCUSSION

**Samprapti chakra (pathophysiology) of Yuvapraksha**

- Kapha (Oily in nature) 
  - Vitiation of Kapha (Excess production) 
    - Sibha Samskra (Local action) 
      - Response: In Skin 
      - Lomakupa (Pilosebaceous unit) 
        - Pidika Utpatti (Pimple formation) 
          - Vrana Vatik Nirmalti (Scalp formation)

- Vata (Dry in nature) 
  - Vitiation of Vata (Excess production) 

- Raita (Blood) 
  - Vitiation of Raita (Blood impurities) 

**Pathophysiology of Acne vulgaris**

- Androgen 
  - Follicular hyperkeratinization 
    - Excess Sebum Production 
      - In Pilosebaceous Unit 
      - Microcomedone 
      - Close Comedone 
      - Open Comedone 
      - Propionibacterium acne 
      - Inflammatory Lesions (i.e., Acne formation) 
        - Pustules, Pustules, Cysts, Nodules
MODERN MEDICINES FOR ACNE, THEIR MECHANISM OF ACTION AND SIDE EFFECTS.

In the definition of *Mukhadushika*, the word *Dushika* can resemble with inflammatory mediators and bacteria that cause acne vulgaris. The word, *Paka* (metabolism) also may resemble with inflammatory pathophysiological factors of acne. In the *Samprapti* (pathophysiological) process of acne, factors stated by *Ayurveda* such as vitiated *Kapha*, *Vata* and *Rakta* can resemble with modern pathophysiological factors such as excess sebum production, hyperkeratinization and blood impurities, respectively. *Vata* is known to have *Pravartaka* i.e. stimulant action (for hyperkeratinization), whereas *Kapha* is oily in nature. As far as the treatment of acne is concerned, both the sciences advise the use of topical as well as oral medications. Modern science describes the treatment as per the severity of the acne, similarly *Ayurveda* has also advised *Raktamokshan* (bloodletting) for severe cases of acne. *Ayurveda* believes in expelling the root causes of acne by advising *Shodhana Chikitsa*. Modern science also aims at eliminating one of the main factors of acne i.e. *P. acnes* bacteria by advising oral as well as local antibiotics. Effective treatment modalities are available in both the sciences, but sometimes adverse effects of modern medicines limit their use.

In the present review, an effort is made to compile scattered references of acne under one roof and also a comparison is made between *Ayurveda* and modern medicines with regards to understanding of acne.

Looking at the incidence of acne in the society, continuous efforts have to be made towards development of newer effective and safe remedies for the treatment of acne. Looking at in-depth knowledge, *Ayurveda* can certainly contribute in the development of newer effective and safe remedies for the treatment of acne.

**CONCLUSION**

The term *Yavanapidaka* indicates the prevalence of the disease in the *Yavana* [young age] stage of the *MadhyaVaya*.

- The cardinal feature of the disease, *Shalmali kantakovat Pidaka*, *Toda* and *Ghana Pidaka* were observed in this patient.
- *Yavanapidaka* has clear-cut resemblance with modern disease Acne Vulgaris which is called to be a physically and psychologically scarring disease.
- Although *Vata*, *Kapha* and *Rakta* are mentioned as *Dosha-Dushya* involved in the pathogenesis of the disease, *Pittaja* symptoms were also found in the disease like *Daha* and *Paka*.
- *Vataja* symptoms were found to be very less. Most common *Vataja* symptom found in patients was *Vedana*.
• Snigdhata/Kleda over face was the most common type of associated complaint seen in this patient followed by Paka and Daha. Shotha and Srava.
• patient has Vata-Pitta dominancy followed by Kapha-Pitta dominancy in his Prakriti.
• Siravyadhan alone is very significant in relieving the associated complaints like Kandu, Daha and Vedana etc due to elimination of vitiated Rakta indirectly correcting Pitta Dosha, due to Srotoshodhana effect, due to improving local blood circulation.
• The results were encouraging; hence further studies may be conducted including large population in this direction. It is not claimed that this study is the final answer to the agonizing problem but it throws a light on an easily available cost effective modality for this ailment.
