Abstract: *Evolution history starting from the absolute space, understands its significance. Each and every cell isolated with magnetism, magnetism is mind, energy, functional consciousness of living beings. This concept more helps to physics, chemistry, biology, and medical field. Mass and energy are not two separate portions. Einstein takes all are energy but Newton takes all are mass. In between these Vethathiri Maharishi explain the spin of mass friction with the space generate magnetism.*

The scientific inventions can't satisfy my mind, searching somewhere else I found a satisfied answer from the concept of genetic centre of Thathuvagnani VETHATHIRI MAHARISHI. In this research I correlate the genetic centre of Maharishi's concept with the DNA information storages.

KEYWORDS: *Magnetism, Consciousness, Mass, Genetic centre and Space.*

INTRODUCTION:

The science of genetics includes the rules of inheritance in cells, individuals populations and the molecular mechanisms by which genes control the growth, development, and appearance of an organism. Gene not only controls cellular process, they also determine the course of evolution. Genetics is the study of inheritance in all of its manifestations, from distribution of single cellular organism up to human. All animals are born with intrinsic knowledge that is essential for survival. In born knowledge in the form of patterns is pre-loaded in the developing brain's long term memory

HISTORY:

- Theory of natural selection Charles Darwin and Alfred Russell.
- Inheritance of traits Gregor Mendel.
- The DNA molecule is shaped like a Twisted ladder. James Watson and Francis Crick.
- Chromosomes Von Waldayer-Hartz
- Each chromosome a different Geneticallload Wihelm Roux.
- DNA information transfer FrederichMiesher.
- DNA sequencing Frederick sanger

and remains intact throughout life time. A baby dog is up and walking within half an hour. A baby bird, at the right time, jumps from the nest and flies for the first time. This information is preloaded in the chromosomes of the living beings. At the moment of conception, chromosomes are taken from the mother and father to form a new cell. That is the start of new living animal. The DNA of the new cell contains the information to construct the whole physical body, the internal organs, including brain. In born information must store in DNA. all inborn knowledge is originally in the DNA of parental single cell. The information storage system is in the form of sequence of codons. A question raise in my mind how the information in put or override inside the molecules of DNA and how output message or create 120 trillion cells of a human body. The scientific inventions can't satisfy my mind, searching somewhere else I found a satisfied answer from the concept of genetic centre of Thathuvagnani VETHATHIRI MAHARISHI. In this research I correlate the genetic centre of Maharishi's concept with the DNA information storages.

EVOLUTIONARY ASPECTS AND INVENTIONS:

GENETICS: Genetics is the study of inheritance in all of its manifestations, from the distribution of single cellular organism up to human traits in family pedigree to the bio-chemistry of the genetic material in our chromosomes, De-Oxy-Ribo nucleic acid, DNA. All living beings originated from single ancestor gene and molecular genetics of A,T,C,G and U. animal cell anatomy and chromosomal numbers in various organisms.

QUANTUM PHYSICS APPLY ON DNA:

THINKING UNIVERSE: Science has gone into the levels of the atom and into the sub-nuclear photon and boson levels. At the lowest level there is a fundamental unity what professor. John Hagelin calls the unified field. At the level we are united.

THE HIDDEN POWER ALSO HIDDEN CONCIOSNESS

- The subtle energy.
- Etheric energy.
- DNA has quantum field.
- Basic principles of magnetism.

VETHATHIRI MAHARISI'S VIEW ON BIO-MAGNETISM

MEGA LEVEL GENETIC CENTRE

- Unified force.
- Universal magnetism
- Mind

GEO LEVEL GENETIC CENTRE

- Magnetic field around the earth

BIO-LEVEL GENETIC CENTRE:

The subject of genetic centre is of utmost relevance to the life of living beings. The genetic centre is one of the imponderables of the universe- as is mind, space (gravity), energy particle and magnetism. The genetic centre is a phenomenon is to be realized through intuition. Life first arose from that the association of holistic proportion of five category elements, which we call non- living matter in a simple process of evolution come into living being. The universal magnetism, which is charged by the vethons, the primary, fundamental energy particles throughout the universe, is called bio-magnetism when it is charged and functioning in a living being. "The imprints of all genetical characters are stored at the genetic centre only by the bio-magnetism". The genetic centre is important because it is the site of the genes, which are the historical record of the living beings.

DNA RESEARCH AND ITS APPLICATIONS

GENETIC ENGINEERING: New DNA may be inserted in the host genome by first isolating and copying the genetic material.

WAVE GENETICS: The science has recently taken major leap in its advance and thus the theory of wave genome has been put forward.

BIO COMPUTER: The genetic apparatus functions as a purely material structure 98% of chromosomes as being the key "intellectual" structure of all cells of an organism including the brain called super-gene-signal continuum. DNA is coil the electromagnetic field change electricity and electrical impulse changes the magnetic field.

ELECTROMAGNETIC FIELD HAS AN EFFECT IN THE PHYSICAL BODY: Magnetic fields also affect the charge of the cell membrane, which allows membrane to open up. These channels are like the doors and windows of a house-by Bruce Lipton.

THREE EXPERIMENTS RELATED MAGNETIC FIELD OF DNA

These were experiments done by the military. Leukocytes (white blood cells) were collected for DNA from donors and placed into chambers so they could measure electrical charges. In this experiment, the donor was placed in one room and subjected to "emotional stimulation" consisting of video clips, which generated different emotions in the donor. The DNA was placed in a different room in the same building. Both the donor and his DNA were monitored and his DNA were monitored and as the donor exhibited emotional peaks or valley (measured by electrical responses), the DNA exhibited the IDENTICAL RESPONSES AT THE SAME TIME. There was no lag time, no transmission time. The DNA peaks and valleys EXACTLY MATCHED the peaks and valleys of the donor in time.

The DNA and the donor had the same identical responses in time. What can this mean? Gregg Braden says it means that living cells communicate through a previously unrecognized form of energy. This energy is not affected by time and distance. This is a non-local form of energy, an energy that already exists everywhere, all the time.

The physical DNA had an effect on the non-physical photons. DNA is communicating with the photons. DNA is communicating with photons through this energy.

EMOTIONAL STIMULATION

DNA: Not only the DNA emitting energy but in it is also storing information. The DNA has memory capacity. The single electron is a member of a whole of many electron, joined in a common wave (sphere shaped magnetic domain). This hypothesis follows from Schrodinger's equation, also describes a relationship between electrons and wave. 'Bohm' argued that electrons are connected by invisible forces They are like corks bobbing on wave in the sea (according Vethathirium that is self-compressive force of space and its quivering nature). "Universe depends precisely on the networked intelligence in the DNA for its existence. A wormhole emerges where there is some probability of signal passing between two particles faster than speed of light to trigger non-local event. Sheldrake suggest that memory may also be inherent in matter at all levels. In atoms and molecules; crystals and indeed in the entire cosmos

there may be some sort of collective memory at work”(TSG.P.20) Sheldrake is suggesting that all memory is somehow stored in this morphic resonance. Each individuals has its own personal memories (genetic centre) available to it while it is living; and in addition these memories also form part of a collective memory that may be conceived of as Universal data (Universal magnetism) base to all DNA. This is precisely the model developed by Pitkanen and Vethathirium. Our individual memories are stored in our DNA and through hyper communication of information via magnetic worm holes; the information stored in our DNA is accessible by all creatures present and future.

MAHARISHI VIEW ON DNA AND OTHER VIEWS

DNA HYPER COMMUNICATION:

Stephen Hawking and Edward Witten are believers in the veracity of human consciousness called hyper communications.

Fosar and Bludorf in their book explains how hyper communication works in DNA.

“There is an intelligent being involved in the laws of nature”-Nobel prize winner Charles Townes.

As a result of Fosar and Bludorf’s theory “The networked intelligence appears to be located in the DNA”.(TSG.P.17)

YOGA LENTHEN THE TELOMERE AS WELL AS LIFE SPAN CHROMOSOMES AND CODONS:

Sheldrake is suggesting that all memory is somehow stored in this morphic resonance. Each individuals has its own personal memories (genetic centre) available to it while it is living; and in addition these memories also form part of a collective memory that may be conceived of as Universal data (Universal magnetism) base to all DNA. The DNA coil is negatively charged due to the phosphate group molecules, which are molecules that have charges that are unevenly distributed. The histone core is positively charged. There are therefore myriads of localized potential difference (voltage) in chromatin, which will enable currents to flow in very complex ways. DNA is actually used an electronic circuit in nanoparticles. In fact, it is said to be the best known nanowire in existence measurements of DNA viruses have revealed that high currents flow through DNA molecules”. (TSG.P.78.). According to Vethathiri Maharishi concept the compressed magnetism becomes electrical and condensed electrical become chemical. According to Bohm; each electron on a given wave length has the wave function encoded in to it. It ‘remembers’ where it came from, and thus remains linked to other electron sharing the wave, even when they are

physically far distant. It follows from this that an electron will remember toBohm; each electron on a given wave length has the wave function encoded in to it. It ‘remembers’ where it came from, and thus remains linked to other electron sharing the wave, even when they are physically far distant. It follows from this that an electron will remember. Bohm argued that electrons are connected by invisible forces. They are like corks bobbing on wave in the sea. If one electron moves, the paths of other electron entangled with it on a shared wave will be modified. The fact that these particles can be described as wave means that they have the ability to affect each other through constructive and distractive interference. Matter, then is composed of waves that are thoroughly and intimately interrelated and the fact that electrons have knowledge of these interrelation implies that they have the capacity to remember their previous states. The point is that these electrons are not just randomly spin-up and spin-down. They are determined by forces that not even Einstein could understand, and they have the capacity to store data . Electromagnetism is memory.(TSG.P. 86).

Albert Popp theoretical bio physicist found that DNA absorbs and emits light. In fact, what he found was that DNA stores light. This stored light is released as very weak, extremely coherent bio photons. It is said that; photons switch on the body’s processes like an orchestra conductor launching each individual instrument into the collective sound. At different frequencies they perform different function. This must therefore involve the DNA acting as a quantum computer to process the probability states of the electrons when the DNA molecules in an excited state. The light that the DNA emits when the molecules fall back to the ground state(these extremely coherent bio photons) are the output of quantum computing process. If this light is directing the body and brain’s process like instruments in an orchestra, then it is highly unlikely that these bio photons are the result of random process of electrons dropping back to the ground state. Quantum processing is taking place and specific instructions are being generated.

Mind of god and mind of man. “Universe depends precisely on the networked intelligence in the DNA for its existence. A wormhole emerges where there is some probability of signal passing between two particles faster than speed of light to trigger non-local event. Sheldrake suggest that memory may also be inherent in matter at all levels. In atoms and molecules; crystals and indeed in the entire cosmos there may be some sort of collective memory at work”(TSG.P.20) Vethathirium mention it consciousness evolved as Pattern, precision and regularity in inanimate, experience ,cognizance and

discriminate in animate forms. DNA codes information, which can be transcribed into RNA molecules, and then translated into a sequence of amino acids as protein molecules are synthesized. "The metaphor of the genetics program can hardly fail to suggest that development is organized by a pre-existing purposive principle that is either mind-like itself or designed by mind (TSG.P.27). THERE IS SOME SORT OF MIND-LIKE OR SPIRITUAL PLAN FOR MORPHOGENESIS.

DNA MADE IN THE IMAGE OF UNIVERSE

Human beings are made with a bigger Universe. Every protein in our body or living being is a "physical electromagnetic complement. Single celled organism actually live in a colony. when they share their 'knowledge' and co-ordinate their behavior by releasing "signal" or spoken language molecules into the environment. The mind was not focused in the head but was distributed via signal molecules to the whole body- By Bruce Lipton.

Mind is a magnetic wave several important parts of the body and environment. It is an extension of consciousness. The origin of consciousness is the eternal space. Mind and consciousness are comparable to water and wave. So core mind is consciousness. - By vethathiri Maharishi.

MICROLEVEL GENETIC CENTRE

Magnetic field around the nucleus level is micro genetic centre

NANO LEVEL GENETIC CENTRE

A localized sphere circulation of energy particle with in the DNA (air (Nitrogen) heavy air (Oxygen) water (Hydrogen, Oxygen) and solid (Carbon))creates magnetic field around the codon.All physical substance was in the nature of space, where each point in the force field had a

certain amount of force. The interaction of these points in the force field set up a vibration that created a pattern of force which we take to be material bodies, in this wave or force field inside the codon have its remodel state of memories, I coined a name as Nano genetic centre.

CONCLUSION:

Mass and energy are not two separate portions. Einstein takes all are energy but Newton takes all are mass. In between these Vethathiri Maharishi explain the spin of mass friction with the space generate magnetism. It is force as well as consciousness. The magnetism knows by science as electromagnetic waves. These are not travel but forming a global field of micro level up to Universe. One over lapped by another, like all planets in sun's magnetic field with different independent self-magnetic field. Likewise the Nano level magnetic field in DNA inter acted with further level magnetic fields up to universe level magnetism. The frequency of magnetic field acts as the knowledge of the living being. The experience shared with space that DNA repeat the same frequency called thought waves called mind. The chemical transformation of the waves from the genetic centre as genes and genomes leads to the organic evolution carrying all the qualities from one sense organism up to man.
